Use your Joystick Controllers with this ATARI® Game Program.™ Be sure the
Controllers are firmly plugged into the
LEFT and RIGHT CONTROLLER jacks at
the rear of your ATARI Video Computer
System.™ See your Owner's Manual for
details.

NOTE: To prolong the life of your ATARI Video Computer
System and protect the electronic components, the Console
unit should be OFF when inserting or removing a game
program.

CONTROLLER ACTION

Use the Joystick to make numbers appear on the
Blackboard Screen. Push the Joystick forward to cycle
through numbers from 0-9. Push it towards you to make the
numbers appear in decreasing order from 9-0. Use the
Joystick Controller to also move the Answer Line. Move the
Joystick to the right and left to move the Answer Line to
the right or left.

The red Controller button records your numbers with the
Computer Teacher. Press the button after you have
selected answers to the math problem and after you
choose problem numbers.

DIFFICULTY

RIGHT DIFFICULTY SWITCH

Use this switch to determine if each round (math problem)
will be timed. In “A” position the player has a time limit to
produce an answer. In “B” position, there is no time limit.

LEFT DIFFICULTY SWITCH

Use the switch to determine the time limit for each round
(math problem).

Games 1-4: With the Difficulty Switch in the “A” position,
you have 12 seconds to record the answer. In “B” position,
you have 24 seconds.

Games 5-8: In “A” position, two digit problems appear with
a 24 second time limit. One digit problems with a 12
second time limit appear when the switch is in “B”
position. (Remember to slide the Right Difficulty Switch to
“A” position first for a timed game.)

SCORING

Each game presents 10 math problems. You score one
point for each correct answer. At the end of each game two
numbers flash on the screen: the number of total problems,
10, is in the right hand side, and your score is on the left
side.

TABLE PROBLEMS

Each game features a particular type of math problem.
After you select the game you want to play, a problem will
appear on the Blackboard Screen.

An example addition problem is:

```
  7
+ 3
---
10
```

The top number, 7, will be underlined. Push the Joystick
forward until you find the number you want to work with.
For example, need some practice on additions using
number 8? Just follow these two steps:
1. Press the Joystick forward once until number 8 appears as the underlined top number.
2. Then record your number 8 with the Computer Teacher by pressing the red Controller button.

**NOTE:** You will find that sometimes there will be less than 10 problems with the top number you have selected. When this occurs, the game automatically selects problems from the next number group.

**HOW TO RECORD AN ANSWER**

Use your Joystick to show your answer on the screen. Push it forward to cycle through the consecutive numbers 0-9. Push it towards you to cycle through the numbers in decreasing order, 9-0. For example, if no number is showing, you can put number 2 on the Blackboard Screen by:

- Pushing the Joystick three times - one time for each of the numbers 0, 1 and 2
- OR
- Pressing the Joystick forward as the game cycles to number 3. Then release the Joystick.

After you've selected the kind of problem and number you want to work with, notice the Answer Line below the math problem on the Blackboard Screen.

The line equals space for one digit of your answer. You will find that you can move the Answer Line to the right and left with your Joystick Controller. Just move the Joystick to the right or left.

If your answer is more than one digit, you will have to move the Answer Line. For example, in the above problem, the answer is 15. To record your answer:

- Select the number 5 with your Joystick. It will appear above the present Answer Line. The last digit of your answer must always appear on this line.
- Move the Answer Line one digit to the left.
- Select the Number 1 with the Joystick. The Number 1 will appear above the Answer Line.
- Now press the red Controller button to record your answer, 15.

Some division problems will have a Remainder. To show the Remainder, move the Answer Line two digits to the right of the Quotient. Select the Remainder number with the Joystick. Now record your entire answer by pressing the red Controller button.

**RIGHT OR WRONG?**

Musical tunes announce whether your answer is right or wrong.
Correct answers receive a "BEEP" then a melodic tune. The Computer Teacher automatically presents the next problem.

Wrong answers receive a "BEEP" and a melodic tune. But the wrong answer disappears as the right answer flashes on the Blackboard Screen. The Computer Teacher automatically presents the next problem.

The game is completed after 10 problems. At the conclusion of the last problem, the total number of problems, 10, and the number correct answers flashes on the Blackboard Screen.

GAME 1 - Addition
Select the top number you want to work with, then start adding.

GAME 2 - Subtraction
Select the top number you want to work with, then start subtracting.

GAME 3 - Multiplication
Select the top number you want to work with, then start multiplying.

GAME 4 - Division
Select the top number you want to work with, then start dividing.

GAME 5 - Addition
The game automatically presents addition problems at random.

GAME 6 - Subtraction
Get ready for surprise subtraction problems.

GAME 7 - Multiplication
Practice your times tables with this game of multiplication.

GAME 8 - Division
Division problems are selected at random for you to solve.

RANDOM PROBLEMS

Follow the same rules and procedures to tackle Random Problems as you did to solve Table Problems. Random Problems feature addition, subtraction, multiplication and division. The only difference between these games and Games 1 through 4 is the absence of a top number selection. You have no control over the numbers in these problems.

For example, after you select a subtraction game, the game presents subtraction problems at random. You begin your answer immediately.
